

DEVICE42

Datacenter Infrastructure Management

Cloud Management

Autodiscover, track and manage virtual devices, passwords and application dependencies in private and public clouds.

IP Address Management

Track IP addresses, VLANs, subnets, MAC addresses. Provision IP addresses.

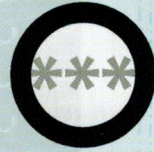

Inventory Management

Auto-discover, track and visualize buildings, rooms, racks, devices, and other assets.

Power Management

Monitor power, temperature, humidity, pressure, dewpoint, and control device/pdu power.

Password Management

Track, secure, and manage passwords and expiration dates.

Impact Management

Understand the impact of a device failure, a maintenance outage, or re-architecture on applications, departments, and customers.

Cable Management

Track, manage, and visualize patch panel and switchport connections.

Benefits

Goodbye spreadsheets...hello automated management.

- Excel spreadsheets and Visio diagrams can get out of hand very quickly.
- At best, spreadsheets are inefficient and unreliable, and Visio diagrams are almost always outdated.
- Go beyond just the physical and have visibility into blades, virtual machines, cloud instances and applications running on them.
- Device42's comprehensive approach to infrastructure management will enable better decision making.

Effectively manage the life cycle of your assets.

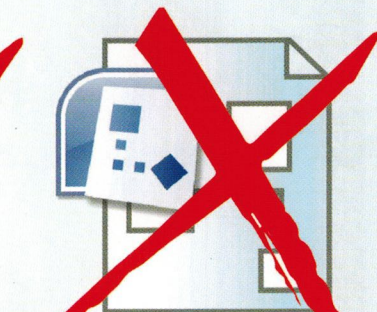

- Improve your planning with financial data for budgeting.
- Record purchases.
- Proactively manage contracts and maintenance renewals.
- Eliminate waste and save money.

Central and secure management of shared accounts and passwords.

- Take control of who has access to what systems.
- Ensure those that require access have the information when they need it.
- Map shared/service accounts to devices and applications.
- Manage shared accounts & passwords with granular, ACL's, track password views, expiration dates and password changes.
- And yes...keep the auditors happy, happy, happy!

EXCEL

VISIO

Better visibility through organization.

- Access to real-time data to understand how the data center is configured, what resources are assigned where, and how the resources are being consumed.
- Always know what you have and where, how it is connected, and who owns it.
- Do you know the next IP address to be used or are you still relying on ping?
- Do you know which racks have enough space to house your new servers?
- What happens and which users are at risk when you take down that server for the next memory upgrade?
- Do you know which racks have enough power to house additional servers?
- Are you aware of the impact of unplanned downtime on each device you manage?
- Do you know the inter-dependencies of your devices, or the device relationship to services?

Reduce the time it takes to solve problems.

- Device42 will discover and correlate relationships between physical, logical, and virtual environments.
- Improve your infrastructure service delivery with accurate and actionable data.
- Device42 can be a powerful tool for problem solving.

Hate data entry? Not a problem.

- Increasing productivity by eliminating low value tasks will free your IT staff to spend more time on high value business initiatives.
- Auto-discovery tools will do most of the job for you.
- Device42's open and powerful REST API is well documented and easy to use.
- Go build the next cool thing and make world a better place.
